

# A Change in Thinking for Dysphagia Rehabilitation: The Strength vs Skill Debate

Professor Maggie-Lee Huckabee

The University of Canterbury Rose Centre for Stroke Recovery & Research

A significant conceptual shift in approaches to rehabilitation of swallowing impairment is underway. Historically focusing primarily on strength-based training, contemporary thinking suggests that 'skill-training' may be more appropriate. This free, 3-hour seminar will present emerging concepts related to the strength vs skill debate, followed by a discussion of potential rehabilitation approaches to accommodate this new thinking. A new approach of skill-training using sEMG biofeedback will be highlighted.

Introducing

## Biofeedback in Strength and Skill Training Protocol and Software
